A Germanium Infrared Aspheric Lens is a high-precision optical component designed to focus or collimate infrared (IR) light, particularly in the mid-wave (MWIR, 3–5 μm) and long-wave infrared (LWIR, 8–12 μm) spectral ranges. Made from germanium—a material known for its excellent infrared transmission, high refractive index, and thermal stability—this type of lens features an aspheric surface profile, which reduces spherical aberration and enhances optical performance compared to traditional spherical lenses. The aspheric geometry allows for more compact and efficient optical systems with superior image quality and minimized distortion. These lenses are commonly used in thermal imaging cameras, infrared sensors, spectroscopy instruments, and military-grade night vision systems, where precision and clarity in infrared light manipulation are critical. Additionally, they are often coated with anti-reflective (AR) films to improve transmission and reduce surface reflection losses.

United States market for Germanium Infrared Aspheric Lens is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
