The global Gesagliflozin market size is predicted to grow from US\$ 29.35 million in 2025 to US\$ 160 million in 2032; it is expected to grow at a CAGR of 12.7% from 2026 to 2032.

In 2025, global Garsorasib production reached approximately 5000 units. Garsorasib Tablets (generic name: Garsorasib Tablets, trade name: Anfangning) is an independently developed oral small-molecule targeted antineoplastic drug in China for the treatment of KRAS G12C-mutant advanced non-small cell lung cancer (NSCLC), belonging to irreversible KRAS G12C inhibitors. Its mechanism of action is to specifically bind and lock the inactive conformation of the mutant KRAS protein, block the abnormal activation of the downstream MAPK signaling pathway, thereby inhibiting tumor cell proliferation and inducing tumor cell apoptosis. This product is a 200 mg yellow oval film-coated tablet, approved for marketing in China in November 2024. It is mainly indicated for adult patients with locally advanced or metastatic KRAS G12C-mutant non-small cell lung cancer who have received at least one prior systemic therapy. It serves as an important domestic innovative targeted drug in the field of precision therapy for lung cancer in China.

Garsorasib, as the second KRAS G12C inhibitor approved in China, occupies an important position in the underserved niche market of KRAS G12C-mutant non-small cell lung cancer, relying on the strong commercialization capability of Chia Tai Tianqing. With its inclusion in medical insurance and the successive launch of multiple domestic similar drugs (Fuzolasib, Golorasib, Jilemei), the market has shifted from an early 'blue ocean' to a fiercely competitive stage. Its core advantages lie in domestic innovation, definite efficacy and favorable safety. In addition, price reduction through medical insurance negotiations has rapidly improved patient accessibility. In the future, market competition will focus on price, medical insurance coverage, clinical efficacy, combination therapy, indication expansion (such as colorectal cancer) and commercial

channels. Relying on its first-mover advantage, medical insurance coverage and strong channels, Garsorasib is expected to maintain a stable share among similar domestic products, while facing challenges including price wars, medical insurance cost control and intensified competition from rival drugs.
