The global G/H-Class Gas Turbine market size is predicted to grow from US\$ 8204 million in 2025 to US\$ 13870 million in 2031; it is expected to grow at a CAGR of 9.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

G/H-class gas turbines are the models with higher technical grades among heavy-duty gas turbines. They are marked by gas working temperature (1500~1600?) and efficiency. The single-unit power range is usually 400~520MW, and the combined cycle efficiency can reach 60%~61%. They have higher power density and better combustion efficiency in design, and can work at higher temperatures and pressures, providing more stable and efficient power output. They are mainly used in large power plants, the oil and gas industry, and other industrial fields that require high power drive.

United States market for G/H-Class Gas Turbine is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
