The global g/i-Line Photoresists for Advanced Packaging market size is predicted to grow from US\$ 151 million in 2025 to US\$ 226 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

G-line and i-line photoresists for advanced packaging are thick-film photoresists utilized in critical advanced packaging processes, such as semiconductor bumping, redistribution layers (RDL), and through-silicon vias (TSV). Imaged under ultraviolet light at g-line or i-line wavelengths, these photoresists are capable of handling relatively high film thicknesses ranging from a few microns to several tens of microns while maintaining high resolution; consequently, they effectively meet the requirements for high-density interconnects in advanced packaging applications. The sales volume for g/i-line photoresists used in advanced packaging stands at approximately 3,200 tons, with an average selling price of \$48,350 per ton. The industry's gross profit margin typically ranges between 22% and 35%.

The upstream segment of the g/i-line photoresist supply chain for advanced packaging centers on four core categories of raw materials: resins, photosensitive components, solvents, and functional additives. A typical positive-tone g/i-line photoresist is fundamentally composed of phenolic resins (or other alkali-soluble resins), DNQ-type photosensitive components, organic solvents, and a small quantity of additives. Additionally, the process requires supporting auxiliary chemicals, such as developers, strippers, and primers/adhesion promoters. The midstream segment encompasses photoresist formulation design, filtration and purification, thick-film coating, optimization of the development window, and process adaptation to meet client-specific requirements. The downstream segment connects directly to the advanced packaging manufacturing processes themselves.

United States market for g/i-Line Photoresists for Advanced Packaging is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
