The global GigE Interface ToF Camera market size is predicted to grow from US$ 70.43 million in 2025 to US$ 127 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, global GigE Interface ToF Camera production reached approximately 243 k units?with an average global market price of around US$ 296 per unit, and a gross profit margin of approximately 20%-40%. GigE Interface ToF Cameras are industrial three-dimensional imaging devices that measure distance by emitting modulated infrared light and calculating the travel time or phase difference of the reflected signal. A typical product integrates a ToF image sensor, VCSEL infrared illuminator, optical system, depth processor, calibration data, industrial housing, Gigabit Ethernet controller, and software development kit. The GigE interface enables high-speed depth-data transmission, relatively long cable distances, centralized device management, and integration with industrial computers, robots, and machine-vision networks. Some models also support GigE Vision, Power over Ethernet, hardware triggering, multi-camera synchronization, IP67 protection, and onboard depth processing. The industrial chain of GigE Interface ToF Cameras includes upstream ToF sensors, CMOS wafers, VCSEL emitters, optical lenses, band-pass filters, depth-processing chips, Ethernet controllers, processors, memory devices, industrial connectors, PCBs, cables, housings, sealing components, heat-dissipation materials, and calibration equipment. The midstream includes sensor packaging, optical design, illumination-module assembly, camera integration, depth-algorithm development, phase and distance calibration, firmware development, GigE Vision protocol integration, PoE circuit design, hardware-trigger integration, multi-camera synchronization, SDK development, eye-safety testing, electromagnetic compatibility testing, environmental testing, and final assembly. Downstream applications include robotic picking, pallet handling, logistics
