GIL refers to a gas-insulated metal enclosed power transmission line. GIL is a power transmission device composed of a grounded alloy aluminum shell and built-in tubular alloy aluminum conductor and uses an insulating gas such as sulfur hexafluoride as the insulating medium. GIL has a large transmission capacity, low unit loss, It has the advantages of flexible layout, high operational reliability, and not being affected by external environmental factors such as dust, humidity and icing. It is suitable for severe weather environments or power transmission occasions where corridor selection is restricted. It can partially replace traditional overhead lines and power cables, and can be used for large-capacity, long-distance power transmission.
