Ginger is a type of spice that belongs to the plant family of Zingiberaceae. It is an excellent source of dietary fiber, vitamin E (alpha-tocopherol), vitamin B6, iron, magnesium, manganese, potassium and selenium. Being aromatic and pungent, ginger adds a distinctive flavor to several food products and has been used as a common ingredient in Asian cuisines for centuries. The spicy aroma of ginger is mainly due to the presence of ketones, especially gingerols, which have significant importance in its food and health-related applications. To extend its shelf-life, gingers can be artificially processed into different versions, such as paste, oil and powder. Some of the basic steps included in ginger processing are harvesting, washing, drying and packaging.
