The global Gires Tournois Interferometers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Phase correction mirrors for ps lasers with (high) negative GDD over a bandwidth of only a few nanometers are called GT interferometers. They are standing wave resonators with (high) negative GDD over a bandwidth of a few nm, which can be used to generate dispersion using highly reflective GTI mirrors. Due to the resonance of the mirror coating, the phase of the light reflected by the GTI mirror is wavelength-dependent, so the GTI mirror can provide angle-dependent negative GDD for ultrafast intracavity dispersion control. However, GTI mirrors introduce some higher-order dispersion and can only provide negative GDD over a limited wavelength range.

United States market for Gires Tournois Interferometers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Gires Tournois Interferometers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
