## Abstracts

The global GIS Solution market size is predicted to grow from US\$ 2379 million in 2025 to US\$ 3475 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

To address the problems of information silos, low analytical efficiency, and insufficient decision support capabilities in traditional spatial data management, Geographic Information System (GIS) solutions emerged. Since the birth of GIS solutions in the mid-to-late 20th century, the field of spatial information processing and application has developed significantly. Currently, GIS solutions have evolved into comprehensive solutions encompassing data acquisition and processing, spatial analysis and modeling, platform development and integration, 3D visualization, and remote sensing applications. They are widely used in urban planning, resource management, environmental protection, transportation, and emergency command, providing complete solutions for spatial, visual, and intelligent integrated applications and decision support across various industries.

The growth of the GIS solutions market is deeply intertwined with the demands of smart cities, sustainable development, and new business models. Enterprises need to focus on technological innovation, service upgrades, and policy coordination, breaking through technological barriers through cloud platforms, AI integration, and data sharing, while seizing opportunities in smart cities, environmental monitoring, and resource management to achieve high-quality development.
