The global GIS Tank-Type Surge Arrester market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

The market prospect for GIS Tank-Type Surge Arresters in the electrical industry is promising. With the increasing demand for reliable and efficient electrical power systems, there is a growing need for effective surge protection devices. GIS Tank-Type Surge Arresters offer specialized surge protection within gas-insulated switchgear substations, ensuring the safety and longevity of critical equipment. As the usage of GIS substations expands, particularly in urban areas where space is limited, the demand for these surge arresters is expected to rise. Manufacturers and suppliers in the electrical protection sector have the potential to capitalize on this growing market opportunity, providing reliable and durable surge protection solutions for GIS substations.

The GIS (Gas Insulated Switchgear) Tank-Type Surge Arrester is an essential component used in electrical power systems to protect the equipment from voltage surges and transients. This surge arrester is specifically designed to be installed in GIS substations, which utilize compact switchgear systems filled with insulating gas like sulfur hexafluoride (SF<sub>6</sub>). The GIS Tank-Type Surge Arrester is installed within the GIS enclosure to provide effective surge protection. It consists of a series of metal-oxide resistors enclosed in a sealed tank, filled with a protective insulating gas. The tank is usually made of stainless steel or other corrosion-resistant materials to ensure long-term reliability in harsh environmental conditions. When a voltage surge or transient occurs in the electrical system, the GIS Tank-Type Surge Arrester rapidly conducts the

excess energy to the ground, diverting it away from sensitive equipment. The metal-oxide resistors within the surge arrester have a high resistance at normal voltages, but as the voltage exceeds a specific threshold, their resistance decreases significantly, allowing the surge energy to be safely discharged into the ground. This surge arrester offers multiple advantages in GIS substations. It provides robust protection against destructive voltage spikes, minimizing the risk of damage to the GIS equipment, such as circuit breakers, transformers, and other crucial components. By preventing equipment failure and downtime, the GIS Tank-Type Surge Arrester helps maintain the reliability and longevity of the electrical power system. Furthermore, the sealed tank design of the arrester ensures its durability and reliability in harsh environmental conditions, including high humidity, pollution, and corrosive gases. It also reduces the need for regular maintenance and extends the service life of the surge arrester. In summary, the GIS Tank-Type Surge Arrester is a vital element in GIS substations, providing effective surge protection for critical electrical equipment. Its ability to rapidly divert excessive energy and withstand tough environmental conditions makes it an essential part of power system reliability and safety.
