As an important ethylene cracking equipment, the GK cracking furnace is derived from the research and development results of the Dutch International Kinetic Technology (KTI) company. The design of this cracking furnace combines advanced process technology and unique furnace tube structure, aiming to efficiently convert hydrocarbon raw materials into ethylene, propylene and other olefin products. The furnace tube is the core component of the cracking furnace. The furnace tube design of the GK cracking furnace is unique and can adapt to the needs of different raw materials and process conditions to ensure the efficient cracking reaction. The GK cracking furnace adopts high-temperature cracking technology to quickly crack hydrocarbon raw materials in the furnace tube to generate cracking gas. The composition of the cracking gas is complex, including ethylene, propylene, butadiene, aromatics and other valuable chemicals.

United States market for GK Cracking Furnace is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
