Glass wafers are wafers that are different from traditional silicon wafers. They refer to all wafers made of glass and processed into the shape of silicon wafers. Glass wafers are mainly used in optical waveguide displays, semiconductor substrates, and wafer-level applications. Optical components and other fields. For applications in the fields of AR and VR, the technical iteration direction of glass wafers is mainly: refractive index (high refractive index can bring large FOV); High light transmittance (brightness); High flatness (to achieve precise optical transmission); Light and thin; Large size (lower costs after large-scale production). Currently, SCHOTT, Corning, etc. have launched wafers with a refractive index of 2.0 for AR equipment.
