Glass Axial NTC Thermistors are electronic components commonly used for temperature measurement and temperature control applications. They feature a glass encapsulation, offering excellent heat resistance and stability, making them suitable for high-temperature environments. With their Negative Temperature Coefficient (NTC) characteristic, the resistance decreases as the temperature increases, making them ideal for use in power circuits, home appliances, automotive electronics, and temperature protection systems. These thermistors offer high precision, reliability, and fast response times for accurate temperature sensing.
