Transparent glass LED display (also known as LED photoelectric glass) is mainly composed of three parts: conductive glass, surface glass, and LED chips embedded in the middle. The LED photoelectric glass screen uses laser etching circuits to achieve functions such as style, text, pattern, lighting, and video display. The glass substrate has high thermal conductivity, which can well maintain the stability of the panel in high-density welding products, and can meet complex wiring requirements. It has transparent display, novel structure, high-definition highlight, simple application, intelligent control, Energy saving, environmental protection, novel materials and imaging features. It is the perfect combination of LED electronic components and optical glass, defining a new concept of indoor high-end transparent commercial display, making transparent display more fashionable and technological, and becoming the new favorite LED display solution that can replace indoor glass curtain walls. Mainly used in high-end commercial displays, art exhibitions, government agencies, indoor glass curtain wall partitions, elevator/escalator display solutions, etc.
