Glass bead filter media for water treatment is a high-performance filtration material made from refined or recycled glass, engineered into smooth, spherical beads. These beads are used as an alternative to traditional sand or gravel in various water and wastewater treatment systems. Their uniform shape and non-porous surface enhance the removal of fine suspended particles—often down to 1–5 microns—while significantly reducing the buildup of biofilms and clogging. Glass bead media offers advantages such as improved water clarity, longer filter cycles, lower backwash water consumption, and greater durability. Commonly applied in municipal water plants, industrial processes, swimming pools, aquaculture, and desalination pre-treatment, glass bead media is valued for its efficiency, sustainability, and low maintenance needs.
