Glass Sleeve is a braided sleeving which is manufactured from continuous filament E-fiberglass yarns. Because it is manufactured by the unique braiding process, it is extremely flexible, allows for expansion and easily conforms to shapes and contours.

Glass braided sleeving was widely used in electrical and electronics applications for the protection and insulation of wires and cables. With the increasing demand for electronic devices and connectivity, the market for glass braided sleeving in this sector continued to grow. These industries required robust and heat-resistant cable and wire protection solutions. Glass braided sleeving offered excellent thermal and mechanical protection, making it a preferred choice for wiring harnesses and cables in vehicles and aircraft. The telecommunications industry saw increased demand for fiber optic cable protection. Glass braided sleeves were used to protect and insulate delicate fiber optic cables and ensure reliable data transmission.
