## Abstracts

The global Glass Door Refrigerators and Freezers market size is predicted to grow from US\$ 1197 million in 2025 to US\$ 1732 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Glass-door refrigerators and freezers are refrigeration equipment used for commercial display and low-temperature storage of food and beverages. Their transparent glass doors allow consumers to directly view the products while maintaining a low-temperature environment. They are widely used in supermarkets, convenience stores, fresh food markets, restaurants, and pharmaceutical retail outlets. In 2025, global sales of glass-door refrigerators and freezers were approximately 1.8 million units, with an average unit price of about US\$680. The industry's overall capacity utilization rate was approximately 78%, and the average gross profit margin was about 19%. Upstream companies mainly come from compressor manufacturing, glass material processing, copper tube and aluminum foil heat exchangers, refrigerants and electronic control systems, and sheet metal structural component manufacturing. Downstream companies are mainly concentrated in food retail, catering services, fresh food supply chains, pharmaceutical refrigeration, and vending machines. In the product cost structure, compressors and refrigeration systems account for more than 30% of the cost, the cabinet and glass door structure for more than 20%, heat exchangers and metal materials for about 20%, electronic control systems and fan components for more than 10%, and the remainder for assembly, manufacturing, transportation, and distribution costs. On the demand side, the downstream demand list includes refrigerated display of beverages in convenience stores, frozen food display in supermarkets, fresh food storage, food preservation in catering establishments, and refrigeration of pharmaceutical products. The downstream customer list includes chain convenience store operators, supermarket groups, catering chains, fresh food e-commerce platforms,

and pharmaceutical retailers. On the business opportunity side, policy drivers include the upgrading of energy-saving equipment standards and the accelerated construction of cold chain infrastructure. Technological innovation drivers are reflected in the continuous application of high-efficiency compressors, environmentally friendly refrigerants, and intelligent temperature control systems. Simultaneously, consumer demands are shifting from simple preservation to improved display effects, energy efficiency, and digital management capabilities, thereby driving the continued growth in demand for glass-door refrigerators and freezers. These types of equipment are widely used in retail terminals such as supermarkets and convenience stores for displaying and storing goods requiring low-temperature preservation.
