According to our LPI (LP Information) latest study, the global Glass Fiber Foundry Filter market size was valued at US\$ million in 2023. With growing demand in downstream market, the Glass Fiber Foundry Filter is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Glass Fiber Foundry Filter market. Glass Fiber Foundry Filter are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Glass Fiber Foundry Filter. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Glass Fiber Foundry Filter market.

Glass fiber foundry filters are widely used in non-ferrous alloy casting processes such as gravity die casting (GDC), low pressure die-casting (LPDC), sand mold casting, and shell mold casting. Aluminum, tin, lead, zinc, and magnesium are used as casting materials due to their relatively low melting point. During the casting process, the molten metal flows through the filter mesh. The glass fiber filter removes slag and other impurities from the molten metal without disintegrating it, as it passes through it to fill the die.

One of the key drivers that will stimulate the growth of the market in the coming years is the growth of the aerospace and defense sector. The aerospace and defense sector increasingly employ non-ferrous metals die casting process along with

forging techniques to reduce the weight of an aircraft and increase its fuel efficiency. Various aircraft bodies and corresponding parts are manufactured using aluminum and other lightweight alloys because these metals reduce the weight of the overall aircraft to a great extent. With the rising number of air passengers and the hike in defense budgets in major countries such as the US, the UK, Japan, France, and several Middle Eastern countries, the aerospace and defense industries will witness considerable growth. This will consequently increase the demand for die cast parts and die cast machinery in the production of commercial and defense aircraft and related equipment, which in turn, will boost the growth of the glass fiber foundry filter market.
