The global Glass Fiber Reinforced PPS market size is predicted to grow from US\$ 1876 million in 2025 to US\$ 2937 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Glass fiber reinforced PPS is an engineering plastic composite made by combining polyphenylene sulfide (PPS) resin with glass fiber. Its main characteristic is a comprehensive improvement in performance, particularly in rigidity, strength, and heat resistance. The upstream industry mainly includes the production of PPS resin and glass fiber, which are the core raw materials for manufacturing glass fiber reinforced PPS composites. Downstream applications are key to driving the development of the entire industry chain, mainly concentrated in the automotive, electronics, aerospace, and home appliance sectors. Global sales in 2024 were approximately 590,000 tons, with an average market price of approximately US\$3,100 per ton. The scale of single-line production capacity varies depending on the production process and investment scale. The industry's gross profit margin ranges from 15% to 30%.

Glass fiber reinforced PPS is a high-performance material. Reinforced with glass fiber, it possesses strength, heat resistance, and dimensional stability. Its price is also more advantageous than many metals and specialty engineering plastics, making it popular in multiple fields. The main driving factors are the upgrading of high-temperature and high-pressure components due to automotive lightweighting and electrification, as well as the demand for high-heat-resistant, flame-retardant, and dimensionally stable shell

materials from industries such as 5G, photovoltaics, and energy storage. At the same time, increasingly stringent environmental regulations are also prompting the replacement of traditional metal parts and thermosetting materials with recyclable, high-performance thermoplastic materials.
