Glass fiber silos are storage structures made of glass fiber - reinforced composite materials. They are designed to store various substances, including agricultural products, chemicals, water, and industrial materials. They are primarily composed of glass fibers embedded in a polymer matrix, usually a type of resin such as polyester, vinyl ester, or epoxy. The glass fibers provide high strength and stiffness, while the resin binds the fibers together and provides a smooth, durable surface. This composite material offers excellent resistance to corrosion, weathering, and chemical attack.
