Glass Label, also known as glass marking or glass etching, refers to the process of applying text, graphics, or patterns to the surface of glass using various methods such as sandblasting, acid etching, or digital printing. These labels are often used in residential, commercial, and industrial settings to provide identification, branding, or decorative enhancements to glass panels, windows, doors, and other glass products.

The industry trend of Glass Label is towards more advanced and sustainable methods of production. Digital printing and laser etching are becoming increasingly popular due to their precision, versatility, and ability to create intricate designs. Additionally, the demand for energy-efficient glass products with labels that promote solar control, thermal insulation, and UV protection is on the rise. The industry is also embracing eco-friendly materials and processes, such as water-based inks and recycling of glass waste.
