## Abstracts

The global Glass Lined Distance Piece market size is predicted to grow from US$ 37.77 million in 2025 to US$ 62.04 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

A Glass Lined Distance Piece is a short, flanged steel spool used in glass-lined piping systems to create or adjust a precise face-to-face distance between two mating flanges while maintaining a continuous glass-lined, corrosion-resistant flow path. It consists of a carbon-steel or stainless-steel core with flanged ends, whose internal bore and relevant wetted surfaces are coated with a fused chemical-resistant glass enamel, manufactured by repeated firing at temperatures above about 820 °C in the same way as other glass-lined pipes and fittings.

Upstream, the product relies on suppliers of low-carbon or stainless-steel pipe and forgings, enamel frit producers, and specialized fabrication and glass-lining shops that can meet HG/T 2142 and DIN 2873 / ANSI B16.5 dimensional and quality requirements. Downstream, glass lined distance pieces are installed in glass-lined piping networks that connect reactors, columns, condensers and storage vessels in chemical, pharmaceutical, agrochemical and related process plants. They are typically used to fine-tune the installed length of a line, to compensate for fabrication or civil tolerances, or to reserve space for future installation of valves and instruments, all while preserving a fully glass-lined wetted path for aggressive acids and organic media.

In 2024, global sales of Glass Lined Distance Piece reached approximately 80 K units, with an average global market price of around US$ 450/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 45%.
