Nylon is a typical designation for an own circle of relatives of artificial polymers composed of polyamides that are essentially repeating units related through amide links. It is a silk-like thermoplastic, usually crafted from petroleum, that may be melt-processed into fibers, films, or shapes. Glass-padded nylon is made by adding glass powder to nylon resin or extruding plastic with glass fiber. Glass-filled nylon is known for its mechanical properties such as high tensile strength and low shrinkage at higher temperatures and has high hardness. These characteristics help it be used to manufacture engineering components used in various industries, such as the automotive and aerospace industries that require extremely high rigidity, high heat resistance and low wear.
