Glass is a silicate non-metallic material melted from chemical substances such as silicon dioxide. It is widely used in buildings to isolate wind and light, increase indoor brightness, improve people's visual effects, beautify the shape of buildings, and enhance the quality of life. living environment. However, what cannot be ignored is that while people are exposed to the natural environment, there are also hidden dangers. Ordinary glass is fragile, and it is easy to expose sharp edges or sharp corners after being broken, causing harm to people. In addition, it is difficult for ordinary glass to meet

fire protection requirements. Therefore, testing the properties of glass is becoming more and more important. Glass quality inspection service providers provide comprehensive testing and certification services for glass and glass products to help reduce risk and verify material quality.
