Abstracts

The global Glass Substrate for Consumer Electronics market size is predicted to grow from US$ 674 million in 2025 to US$ 987 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2024, global glass substrate for consumer electronics production reached approximately 187 m sqm, with an average global market price of around US$ 3.5 per sqm.Glass substrate for consumer electronics is a special glass material with high precision and high stability specially designed for consumer electronics products such as mobile phones and tablet computers. It usually has high transparency, low thermal expansion coefficient, good mechanical strength and chemical stability, and can withstand high temperatures and various environmental conditions during manufacturing. According to different functions in electronic products, it can be mainly divided into cover glass, touch screen glass and display glass substrate. Its thickness is usually between 0.1 mm and 1.1 mm, belonging to the category of ultra-thin electronic glass.

The annual production capacity of a single production line for glass substrates used in consumer electronics is typically 3,000-5,000 square meters per year, with a gross profit margin of around 26%.

Downstream consumption of glass substrates for consumer electronics includes mobile phones (30%), computers (35%), wearable devices (25%), and others (10%).

Market Concentration and Key Players:

Internationally, the market concentration of glass substrates for consumer electronics is

relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Nippon Electric Glass and AGC and other large manufacturers; from the domestic point of view, there is still a lot of room for development of glass substrates for consumer electronics.

Manufacturing Processes and Market Trends:

The core manufacturing process of glass substrate for consumer electronics is overflow melting method, which introduces molten glass into conduit and overflows from both sides to form substrate, which can directly obtain double original smooth surface without secondary polishing, suitable for producing ultra-thin glass. Its process flow covers many links such as raw material preparation, high temperature melting, precision molding and cutting detection, among which the glass through hole technology involves precise steps such as laser-induced deep etching, and the technical barrier is relatively high. In terms of market trends, consumer electronics is the core driving force, and stable shipments of smartphones and tablets continue to drive demand, especially 8K Ultra HD and flexible display technologies are driving the industry towards large size and ultra-thin development. The market scale of China has grown significantly, and the localization rate has gradually increased. Domestic enterprises such as Rainbow Shares and Kaisheng Technology have made breakthroughs in technologies such as G8.5 generation line, accelerating import substitution by virtue of cost advantages. In the future, with the development of emerging fields such as 5G communication, vehicle display, AR/VR, etc., glass substrates will have broader market application prospects due to their excellent optical properties and thermal stability.
