According to our LPI (LP Information) latest study, the global Glass Substrate for Semiconductor Packaging market size was valued at US\$ 1193.5 million in 2023. With growing demand in downstream market, the Glass Substrate for Semiconductor Packaging is forecast to a readjusted size of US\$ 2784.1 million by 2030 with a CAGR of 12.9% during review period.

The research report highlights the growth potential of the global Glass Substrate for Semiconductor Packaging market. Glass Substrate for Semiconductor Packaging are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Glass Substrate for Semiconductor Packaging. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Glass Substrate for Semiconductor Packaging market.

Glass substrate is a thin glass board on which a thin circuit is deposited with precision. This report will research the application in semiconductor packaging.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak

shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
