Glass tube flowmeters are devices used to measure the flow rate of liquids or gases by allowing the fluid to pass through a vertically oriented, tapered glass tube containing a float. As the fluid flows upward, it lifts the float to a position where the upward force from the fluid equals the downward gravitational force on the float, with the float's height indicating the flow rate. These flowmeters are widely used for their simplicity, reliability, and visual indication of flow, particularly in laboratory, industrial, and water treatment applications, where moderate accuracy and cost-effectiveness are required.

United States market for Glass Tube Flowmeters is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
