The global Glassforming Aprons market size is predicted to grow from US$ 154 million in 2025 to US$ 214 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2024, the global production of glass fiber molded aprons is 1.97 million pieces, with an average selling price of US$78 per piece.

Glassforming aprons are critical contact components used in the glass fiber production process. They are primarily installed in the sizing impregnation system to guide and stabilize high-speed glass fiber strands while ensuring uniform sizing. They are typically made of high-performance elastomers, offering excellent wear and corrosion resistance and wettability. During the spinning process, these aprons come into direct contact with the glass fiber filaments, controlling fiber tension, guiding path, and surface treatment, significantly influencing the final fiber's physical properties (such as hairiness, breakage rate, and loss on ignition). Their surface roughness, hardness, and elastic modulus must be precisely controlled to accommodate glass fiber products of varying counts and sizing types.

United States market for Glassforming Aprons is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
