The enamel discharge valve can be equipped with mirror port or cleaning port, temperature measuring tantalum nail, valve position display and on-site digital temperature controller. They are often called 'flush valves' or 'drain valves' because they are necessary for drainage in all FRP lined containers. The glass lined flushing valve is used to open and close the drain pipe at the bottom of the glass lined reactor. The structure can be divided into three types: Enamel upper expansion discharge valve, enamel lower expansion discharge valve and enamel ball valve. According to the sealing form, it can be divided into packing seal and waveform seal. According to the operation form, it can be divided into manual enamel unloading valve, pneumatic enamel unloading valve and electric enamel unloading valve. In addition, the enamel discharge valve can be equipped with mirror port or cleaning port, temperature measuring tantalum nail, valve position display and on-site digital temperature controller.
