## Abstracts

The global Glide Slope Signal Reception Antenna market size is predicted to grow from US\$ 247 million in 2025 to US\$ 353 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In 2025, global annual sales of glide slope signal reception antennas will reach approximately 376,000 units, with an average price of approximately US\$672 per unit and an industry average gross profit margin of approximately 28%. This type of antenna is a fuselage glide slope signal receiver specifically designed for use in aircraft instrument landing systems (ILSs). Typically installed beneath the fuselage or in the vertical tail area, it receives UHF/VHF guidance signals transmitted from the ground, enabling vertical navigation and precise landing control during the aircraft's approach phase, frequency is generally between 329 and 335.3 MHz. Fuselage ILS glide slope antennas are compact, utilizing a weather-resistant composite housing and a highly directional dipole array design. They offer excellent interference rejection and low standing wave ratio (SWR), maintaining signal linearity and phase stability in complex electromagnetic environments. RF cables and copper conductors account for approximately 22% of the cost, the composite housing for approximately 18%, and precision assembly and commissioning for approximately 20%. Upstream suppliers primarily rely on suppliers of aviation-grade RF materials, epoxy composite housings, and precision RF welding and testing equipment. Downstream customers include aircraft manufacturers such as Boeing, Airbus, Embraer, and Cessna, as well as aircraft maintenance organizations. Comant Industries, an American manufacturer, is a major manufacturer in this field, with an annual production capacity of approximately 80,000 sets. Its products are widely used in the ILS systems of business jets, general aviation, and military aircraft, and are known for their stability, reliability, and high FAA certification coverage.
