The global Global Vehicle Target (GVT) market size is predicted to grow from US\$ 126 million in 2025 to US\$ 257 million in 2032; it is expected to grow at a CAGR of 10.8% from 2026 to 2032.

The Global Vehicle Target (GVT) is a standardized software vehicle test target used for Advanced Driver Assistance Systems (ADAS), autonomous driving, and crash simulation testing. It simulates the full dimensions of a real vehicle, possesses deformable and energy-absorbing properties, and can be used for static or dynamic testing. GVT provides repeatable, quantifiable, and safe test conditions for evaluating vehicle perception algorithms, Automatic Emergency Braking (AEB) triggering, and crash response, while also enabling high-fidelity dynamic testing in conjunction with motion platforms. In 2025, approximately 8,580 Global Vehicle Target (GVT) units were shipped globally, with an average price of approximately US\$15,000 per unit and a gross margin of approximately 40%.

With the rapid development of autonomous driving technology and Advanced Driver Assistance Systems (ADAS), the demand for high-precision, repeatable test targets has increased significantly. Soft vehicle targets can provide a safe and controlled testing environment in both laboratory and field testing, thus becoming a key infrastructure for the development of autonomous vehicles and ADAS. The demand for soft vehicle targets continues to grow with the development of autonomous driving and active safety technologies. Dynamic soft vehicle targets are typically equipped with motion platforms and programmable functions, simulating real vehicle behavior; they are more expensive and suitable for medium- to high-speed crash simulations and AEB system verification. Static low-speed soft vehicle targets are suitable for perception algorithm verification and low-speed obstacle avoidance testing. Market supply is concentrated among a few

international manufacturers and a small number of domestic companies. In addition, traffic safety assessments, collision simulations, and intelligent transportation system integration testing are also potential growth areas. With the increase in testing of L3 and above autonomous vehicles in the future, industry demand will further expand.
