The global Glove Box and Vacuum Coating Machines market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Glove box and vacuum coating machine is an integration of the vacuum coating system and the glove box system. The thin film evaporation is completed in the high vacuum evaporation chamber, and the sample preservation, preparation, and post-evaporation testing are completed in the high-purity inert gas atmosphere in the glove box. This makes the entire thin film growth and device preparation process highly integrated in a complete and controllable system, eliminating the influence of unstable factors in the atmospheric environment during the preparation of large-area organic circuits, and ensuring the preparation of high-performance, large-area organic optoelectronic devices and circuits.
