## Abstracts

The global Gloves market size is predicted to grow from US$ 17770 million in 2025 to US$ 27900 million in 2031; it is expected to grow at a CAGR of 7.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A glove is a garment covering the whole hand. Gloves have separate sheaths or openings for each finger and the thumb; if there is an opening but no (or a short) covering sheath for each finger they are called fingerless gloves. Fingerless gloves having one large opening rather than individual openings for each finger are sometimes called gauntlets, though gauntlets are not necessarily fingerless. Gloves which cover the entire hand or fist but do not have separate finger openings or sheaths are called mittens. Mittens are warmer than other styles of gloves made of the same material because fingers maintain their warmth better when they are in contact with each other. Reduced surface area reduces heat loss.

One of the major factors driving this market?s growth is the sharp increase in natural rubber production in countries like Thailand, Vietnam, and Indonesia. Although the world rubber production is expected to be weak during 2016-2017, the consumption in the Association of Natural Rubber Producing Countries (ANRPC) will increase by a significant margin. In order to overcome the factors leading to a decline in rubber production, the rubber board of India has taken several initiatives, which has led to an increase in production of rubber, which will positively affect the gloves market over the coming years.
