Glow plasma cleaning machine is a device that uses plasma generated by glow discharge phenomenon to treat the surface of an object. The glow plasma cleaning machine converts gas into plasma through high-voltage discharge, forming a plasma glow discharge phenomenon. During the glow discharge process, electrons and ions obtain sufficient energy under the action of the electric field, collide with gas molecules, and produce active particles with high energy. These active particles react with the surface of the object, remove pollutants through physical and chemical effects, and improve surface properties. This treatment method has the advantages of high efficiency, rapidity, and no residue.

The global Glow Plasma Cleaning Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
