The global GLP-1 Receptor Agonist Anti-obesity Drug market size is predicted to grow from US\$ 24215 million in 2025 to US\$ 72176 million in 2032; it is expected to grow at a CAGR of 19.4% from 2026 to 2032.

GLP-1 receptor agonist anti-obesity drugs are prescription medicines that mimic or enhance glucagon-like peptide-1 activity to delay gastric emptying, increase satiety, reduce appetite and improve glucose metabolism, supporting long-term weight management in people with obesity or overweight with related risk factors. The category includes injectable products, oral formulations and long-acting modified dosage forms, with key evaluation metrics including weight-loss efficacy, durability, gastrointestinal tolerability, cardiometabolic benefit, dosing convenience and access. In 2025, global GLP-1 Receptor Agonist Anti-obesity Drugs production reached approximately 312 million unit. The average gross profit margin of this product is 80%.

The GLP-1 anti-obesity drug market is expanding rapidly amid rising obesity prevalence, stronger clinical evidence and higher patient willingness to pay. Originator companies are driving growth through capacity expansion, label expansion and improved dosing formats, while healthcare providers increasingly integrate pharmacological weight management into chronic disease care.

Competition is moving beyond weight-loss magnitude to durability, cardiovascular benefit, muscle-mass preservation, post-discontinuation rebound and affordability. Pen injectors remain the dominant format, while oral GLP-1 and longer-acting formulations may improve acceptance. However, manufacturing scale-up, cold chain requirements, supply shortages and pricing pressure remain major constraints.

Market growth is influenced by payer policy, reimbursement coverage, generic entry, online prescription compliance and drug safety monitoring. Future competition will center on differentiated clinical evidence, global capacity, supply-chain resilience and integrated chronic disease management services.
