Chemicals employed in the building & construction industry such as phosphates are likely to be substituted by glucaric acid owing to its naturally occurring and renewable nature. Issues regarding the usage of phosphates owing to their toxic nature is the primary driver of the glucaric acid market. Glucaric acid was one of the widely used chemicals in the U.S. in 2016. It is anticipated to offer ample growth opportunities during the forecast period. Implementation of stringent government regulations regarding the usage of harmful chemicals to curtail environmental damage is the factor driving the glucaric acid market in the U.S. The country is one of the major producers of glucose, which is primarily the reason for the presence of key glucaric acid manufacturing companies. According to a survey by the U.S. Department of Energy, glucaric acid has been identified as the top chemical made from renewable sources.
