Glucosamine is a natural compound found in cartilage — the tough tissue that cushions joints. Since glucosamine has an active amino group and its chemical properties are not very stable, the glucosamine compounds commonly used on the market currently exist mainly in the form of glucosamine hydrochloride, glucosamine sulfate and their complex salts.

Glucosamine sulfate is a natural amino monosaccharide and an important component necessary for the synthesis of proteoglycans in the matrix of human articular cartilage. It can repair cartilage, promote the formation of synovial fluid, and effectively inhibit the inflammatory process.

The global Glucosamine Sulfate API market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
