The global Glufosinate Ammonium market size is predicted to grow from US\$ 499 million in 2025 to US\$ 986 million in 2031; it is expected to grow at a CAGR of 12.0% from 2025 to 2031.

Glufosinate ammonium is an organic compound with the chemical formula $C_5H_{15}N_2O_4P$. It was first brought to market in 1984, and is widely used on control weeds in more than 100 crops in 82 countries around the world. The main application of glufosinate ammonium is the production of herbicide. As a broad-spectrum herbicide, glufosinate ammonium acts against a wide range of annual and perennial broadleaf weeds and grasses. This also includes difficult-to-control glyphosate-resistant weeds such as amaranthus, lolium, conyza and malva. Currently, with the features of high efficiency, low toxicity and easy decomposability, glufosinate ammonium gains great attention.

Glufosinate Ammonium has two models: 95%TC and 50% TK. TK is an abbreviation of technical concentration. TC is an abbreviation of technical material. The active ingredient of 95%TC is 95%min. Most enterprises can offer this product. The active ingredient of 50%TK is 50%min, and supply of TC is limited.

The major players in global Glufosinate Ammonium market include Lier Chemical, Jiangsu Huifeng, etc. The top 2 players occupy about 60% shares of the global market. North America and China are main markets, they occupy about 90% of the global market. 95%TC is the main type, with a share about 90%. Herbicide is the main application, which holds a share about 75%.
