A glycerine filled pressure gauge is a type of pressure measuring instrument that contains a quantity of glycerine, a colorless, odorless, and viscous liquid, to increase the pressure acting on its bourdon tube. This additional fluid helps to dampen pressure pulsations and reduce the effects of temperature changes on the gauge's accuracy. Glycerine filled gauges are often used in applications where the pressure is high or where the environment is harsh, such as in oil refineries, chemical plants, and pipelines. They are known for their accuracy, stability, and resistance to shock and vibration.

The global Glycerine Filled Pressure Gauge market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
