The global Glycerol (Purity ≥95%) market size is predicted to grow from US\$ 2706 million in 2025 to US\$ 3914 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Glycerol (Purity ≥95%) refers to refined glycerin products containing at least 95 wt.% glycerol, typically produced through distillation, desalting, decolorization, and vacuum purification of crude glycerin. In 2025, global glycerol (Purity ≥95%) production reached approximately 3560.4 Kilotons. The glycerol (Purity ≥95%) industry chain is an important part of the global oleochemical and biodiesel sectors. Upstream raw materials mainly include natural oils, animal fats, and petrochemical feedstocks. Palm oil, soybean oil, rapeseed oil, and animal fats are the major natural sources. With the rapid expansion of the global biodiesel industry, crude glycerin generated as a by-product has become the dominant feedstock for refined glycerin production. Some manufacturers also produce synthetic glycerin from petrochemical routes such as propylene and epichlorohydrin, although natural oil-based production still dominates the global market.

The glycerol (Purity ≥95%) market is one of the most stable and steadily growing segments within the global oleochemical industry. Continuous expansion of biodiesel production has ensured abundant crude glycerin supply, pushing the industry toward higher-value refining and purification. Market competition is increasingly shifting from production capacity to purification technology and certification capability, especially for USP, FCC, and EP pharmaceutical/food certifications. Regionally, Southeast Asia dominates global supply due to strong palm oil resources, while Europe and North America focus more on pharmaceutical and food-grade applications. China is rapidly expanding its capabilities in electronic-grade and ultra-high-purity glycerin production. In the future, applications in natural humectants, bio-based materials, electronic

chemicals, fermentation engineering, and green chemicals are expected to continue expanding, with electronic-grade and ultra-high-purity products representing the fastest-growing segments.
