Glycine chelated minerals are minerals bound to glycine, an amino acid, through chelation. Chelation is a chemical process that involves the binding of a mineral to an organic molecule, in this case, glycine, to form a stable complex. In plant nutrition, glycine chelated minerals are used to enhance the availability and uptake of essential nutrients. Chelation, a process that involves binding minerals to organic molecules like glycine, plays a critical role in improving the solubility and stability of minerals in the soil, making them more accessible to plants.
