Glycine chelated minerals are minerals bound to glycine, an amino acid, through chelation. Chelation is a chemical process that involves the binding of a mineral to an organic molecule, in this case, glycine, to form a stable complex. Glycine chelated minerals are widely used in animal nutrition to enhance the absorption and bioavailability of essential minerals. The chelation process, which binds minerals to the amino acid glycine, improves the stability and solubility of these minerals, making them more efficiently absorbed by the animals' digestive systems.
