Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Glycomics is the comprehensive study of glycomes (the entire complement of sugars, whether free or present in more complex molecules of an organism), including genetic, physiologic, pathologic, and other aspects.

Glycomics "is the systematic study of all glycan structures of a given cell type or organism" and is a subset of glycobiology.

The term glycomics is derived from the chemical prefix for sweetness or a sugar, "glyco-", and was formed to follow the omicsnaming convention established by genomics (which deals with genes) and proteomics (which deals with proteins).

The complexity of sugars: regarding their structures, they are not linear instead they are highly branched. Moreover, glycans can be modified (modified sugars), this increases its complexity.

Over the next five years, LPI(LP Information) projects that Glycomics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
