Glyphosate Isopropylamine Salt Solution is a highly effective broad-spectrum non-selective herbicide, which is a salt formed by the reaction of glyphosate with isopropylamine and formulated as an aqueous solution. This herbicide is rapidly absorbed and transported throughout the plant, inhibiting the activity of enolpyruvoylshikimate-3-phosphate synthase within the plant, obstructing protein synthesis, and ultimately causing the death of weeds. It is suitable for weed control in orchards, rubber plantations, tea gardens, and other crop fields, and is relatively environmentally friendly.
