GNSS Positioning Correction Service is a service designed to provide correction and enhancement of raw GNSS positioning data by receiving, processing, and analysing Global Navigation Satellite System (GNSS) signals to improve positioning accuracy and reliability. Such services typically utilize infrastructure such as ground receiving stations, data processing centres, and communication networks to receive GNSS satellite signals, perform real-time or post-processing data analysis, and then provide corrective parameters or corrected location information to the user. The main purpose of GNSS Positioning Correction Service is to reduce or eliminate positioning errors caused by signal propagation errors, multipath effects, and atmospheric interference, so as to improve the accuracy and reliability of GNSS positioning system. This kind of service has important application value for areas requiring high precision positioning, such as surveying, agriculture and so on.

The global GNSS Positioning Correction Service market size is projected to grow from US\$ 633 million in 2024 to US\$ 966 million in 2030; it is expected to grow at a CAGR of 7.3% from 2024 to 2030.
