Abstracts

The global Golf Woods market size is predicted to grow from US$ 2347 million in 2025 to US$ 3095 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

A wood is a type of club used in the sport of golf. Woods have longer shafts and larger, rounder heads than other club types, and are used to hit the ball longer distances than other types.

The emerging trend of golf tourism due to the presence of numerous golf courses across the world, the increase in the middle-class population, and the growth in the number of professional and amateur female golfers drive the market growth. The Gulf Cooperation Council (GCC) and Caribbean countries have become popular golf tourism destinations, owing to the availability of modern and advanced facilities. Golf is an expensive outdoor recreation activity that is popular among business individuals and amateur players.
