The GOS ceramic array is an array structure composed of multiple GOS ceramic plates, which are usually used in high-performance radiation detection and imaging systems. Each ceramic plate is made of gadolinium oxysulfide (Gd₂O₃S) material, which has high light output and density and can effectively convert radiation energy into optical signals. Through the design of the array, high-resolution imaging and a wider detection area can be achieved. The GOS ceramic array ensures the stability and reliability of the detector while providing high-quality images.
