Gothic arch ball bearing stages are precision motion platforms that utilize a uniquely curved, gothic arch-shaped bearing raceway to guide ball bearings, enabling highly accurate and smooth linear or rotary movement. This design increases the contact area between the ball and the rail, improving load capacity, stiffness, and precision while maintaining low friction. The enhanced guidance accuracy and rigidity make these stages particularly suitable for high-performance applications in fields such as semiconductor inspection, optical alignment, precision metrology, and life sciences instrumentation. Their compact form factor and high repeatability make them ideal for systems requiring consistent, low-maintenance motion control with minimal deflection.
