The global GPRS Water Meter market size is predicted to grow from US\$ 108 million in 2025 to US\$ 144 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

GPRS water meter is a kind of water meter using GPRS wireless communication technology to realize remote meter reading. It transmits the meter reading to the cloud platform through the GPRS network, without manual meter reading, improving the meter reading efficiency and accuracy. GPRS technology has higher transmission rate and longer transmission distance, which is suitable for deployment in various complex environments.

Although GPRS water meters used to be the mainstream remote meter reading solution, with the continuous development of Internet of Things technology, its application is gradually limited. NB-IoT technology, with its low power consumption, wide coverage, and large connection characteristics, has gradually replaced GPRS technology to become the preferred solution for smart water meters. However, GPRS water meters still have a certain market demand, especially in some specific application scenarios, such as industrial parks, large commercial buildings, etc., where the data transmission rate and real-time requirements are high. Therefore, GPRS water meters will still exist in the future for some time, but its market share will gradually shrink, mainly for some specific application scenarios.
