The global GPS Data Collectors and Field Controllers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

GPS data collectors and field controllers are tools used in surveying and geomatics industries for collecting and managing geospatial data. GPS data collectors typically use GPS receivers to collect positioning data from satellites, while field controllers assist in data collection, storage, and processing by integrating GPS, sensors, and other systems. These tools enable precise measurement and mapping of landforms, infrastructure, and other geospatial features.

The industry trend for GPS data collectors and field controllers is towards increased use in precision agriculture, smart cities, and other applications that require precise geospatial data for decision-making and planning. With the growing demand for sustainable and efficient agriculture practices, smart cities that leverage geospatial data for infrastructure planning and maintenance, and other areas where precise measurement and mapping are essential, the use of GPS data collectors and field controllers is expected to grow. Additionally, the trend towards digitalization and automation in surveying and mapping is contributing to the increasing use of these tools, as they enable faster, more accurate, and more reliable data collection and management.
